■■ Feed & Keyword Management — Quick Reference Cheat Sheet

■ File / Tool	■ Location	■■ Purpose / When to Use
sources_by_region.json	website_2025/	Master list of feeds per region. Add/remove/edit feeds here.
rss_proxy.php	website_2025/	Proxy fetcher with host whitelist & referers. Update if feed blocked
feed_probe.html	website_2025/	Test ALL feeds in config. Use after editing sources_by_region.jso
probe_one.html	website_2025/	Test ONE feed manually with UA/referrer. Use when debugging f
quick_add_feed.html	website_2025/tools/	Quickly add a feed via form. Appends to sources_by_region.json
save_json.php	website_2025/	Backend helper to save new feeds or keywords from quick-add p
filter_keywords.js	website_2025/pipeline/	Keyword filter rules. Ensures only disability-related content passe
quick_add_keyword.html	website_2025/tools/	Quickly add or remove keywords. Updates keywords_by_region.j
keywords_by_region.json	website_2025/pipeline/config/	Stores your keyword sets per region. Used by filter_keywords.js.
Pipeline	website_2025/pipeline/	Fetch feeds via proxy → Filter with keywords → Prep for display.
Website Display	website_2025/index.html	Front-end output showing filtered disability news.

■ Workflow tips:

- Use probe_one.html first when a feed fails → test UA + referer.
- If it works, add feed into sources_by_region.json (or quick_add_feed.html).
- Run feed_probe.html to test ALL feeds together.
- If 403 or Host not allowed → add domain to rss_proxy.php allowlist + referer map.
- Filter relevance: tweak keywords in quick_add_keyword.html.
